Abstract of JP 7279366 (A)

PURPOSE: To provide an assembly type veranda made of a wooden floor board material, capable of saving the labor for the cutting work and corrosion preventing treatment at an execution site and shortening the construction period at a low cost, and attaining a high corrosion preventing property and a water leak preventing property.

CONSTITUTION: Multiple wooden floor board materials 2 are arranged nearly in parallel, and they are connected together to form the floor of an assembly type veranda. A connecting recess 11 and a connecting projection 12 are relatively formed on the connecting end faces of each wooden floor board material 2, a recess 13 having a hook-shaped cross section of the connecting edge, and a resin film 10 is applied on the whole surface including the recesses 11, 13 and projection 12 of the wooden floor board material 2. The connecting recess 11 and connecting projection 12 of two adjacent wooden floor board materials 2 are coupled with each other and filled and stuck with an adhesive 23, and a wooden sealing material 9 is coupled with the recess 13 having the hook-shaped cross section and filled and stuck with the adhesive 23.
